

4G MK2

Point to Point Telemetry

DESCRIPTION

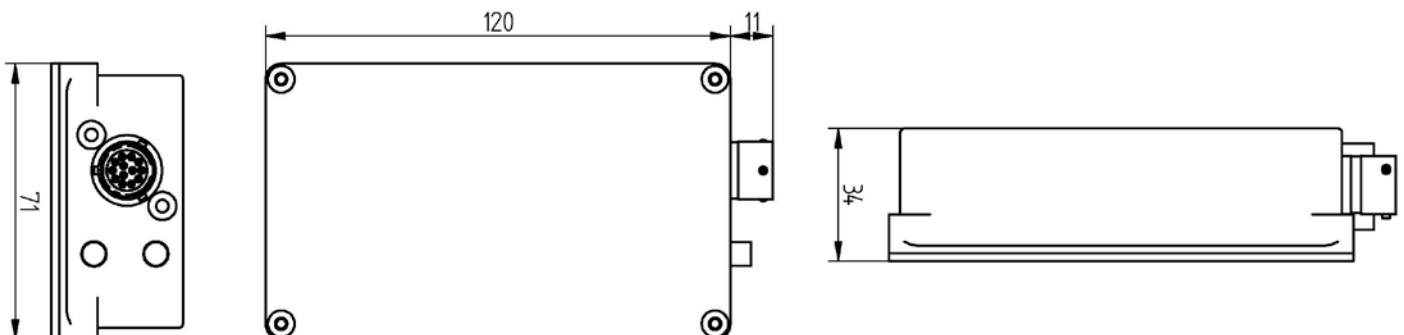

The 4G TELEMETRY MK2 is a point to point 4G telemetry system composed by two units. Data collected on the vehicle through RS232 and ETHERNET (TCP-IP/UDP) by the vehicle unit, can be sent to the garage unit connected to the engineer laptop.

We have developed a configuration software to set and monitor the 4G TELEMETRY MK2 (refer to data sheet Telemetry Manager).

FEATURES

- Integrated sim card operates all over the world
- 2/3/4 G connectivity
- No internet connection needed
- The possibility to choose multiple operator per country
- Full automatic network connection process
- Self reconnection algorithm
- Available in 2 versions: Americas and rest of the world
- Dust and water resistant IP67
