

TELEMETRY MANAGER

SOFTWARE FOR 4G TELEMETRY

DESCRIPTION

Telemetry Manager is the configuration and monitoring software for 4G modems for telemetry series MK1 and MK2.

Once the credentials have been entered, the application allows you to consult the list of your devices. For each of these is then possible to view the state of connectivity and evaluate the trend in traffic volume in graphic form. To obtain the best performance in different contexts of use, it is also possible to configure in detail the connectivity modes (operators, bandwidth, VPN, etc.).

Finally, Telemetry Manager allows you to configure your devices to operate with different loggers and softwares for data acquisition and analysis as a dedicated tab provides the tools for setting transmission methods and parameters to and from third-party devices and software.

FEATURES

- Login with your credentials
- Connection status monitoring
- Real-time and total monthly consumption
- Mobile connectivity configuration
- Configuration of acquisition / transmission mode
- Diagnostic configuration via CAN

SUPPORTED MODES

CAR DATA AQUISION

- Serial

CAR DATA AQUISION

- Serial
- Client Udp
- Client Tcp

REQUIREMENTS

- Windows PC version 7 SP1, 8.1 or 10
- .NET Core 3.1 (included)
- Internet connection
